Vehicle To Vehicle Anti-Collision System

Reduces the risk of impacts and collisions between industrial vehicles used in the workplace, creating safer places to work.

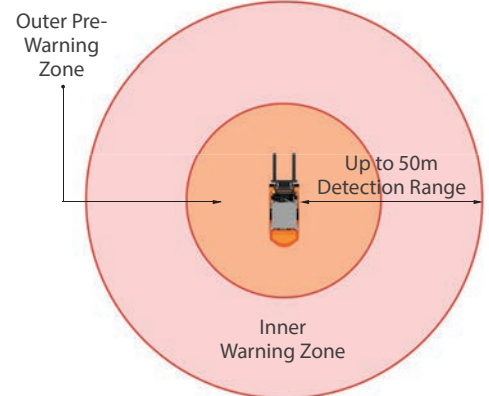

The vehicle to vehicle system offers reliable long-range vehicle detection to reduce the risk of impacts and collisions between vehicles used in the workplace.

Two configurable warning zones, an outer pre-warning zone, and an inner warning zone are available with each system.

Connecting to the system via a web-enabled device allows you to easily configure detection ranges, alarm volume and alarm sounds.

- Reduce impacts and collisions
- Long-range detection
- Fits to any workplace vehicle
- Easy Configuration
- Audible visual alarms

Vehicle Detection Zones

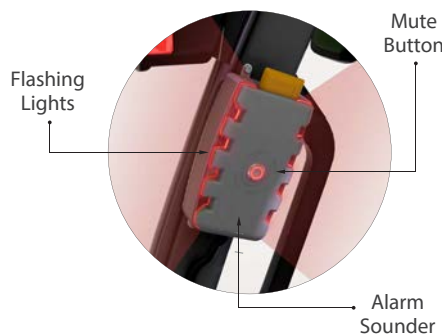

Up To 50m Detection
